Following the steps

1. General technical description
2. Device preparation
3. APP Download
4. APP Install

# 1. General technical description

- We have to remember that this guide is only for Android devices.

- This APP works well on Android 4.0.0 and upper versions.

- Is mandatory have about 500 MB free storage to use the APP.

- Because the APP works well, APP have to grant permisions to Camera, Storage, GPS/location and Wi-Fi and 4G.

- The APP works «offline».

2. Device preparation

- To install this APP, we have to turn on the «developer mode» in our device

- To active the «developer mode» we have to follow the next stepts:

  - Enter to «Settings» menu

    - Seek and click over:

      - «System» or «About device» or «information about telephone»

    - We have to look for «Build number»

      - We have to do all clicks as be necessary over the «build number» to active «developer mode»

2. Device preparation

- If we can't become «developer mode» we can look for on Google or Youtube:

  - «active developer mode on» + (your device's name)

3. APP Download

- When we become «mode developer» we have to access: http://maps.garfei.com/mbolo-app

- In this web we find the APP to download to your device.

- The download file is called «geogis-0.3-debug.apk»

Welcome to MBolo GIS APP Collector

You can update or install the MBolo APP here, clicking on "Download APK"
The current version is "0.3" updated on August 2019

User guide

4. APP Install

- When the app is downloaded, we have to go to «Download» folder.

  - We can use some file manager app, for exemple the default file manager of your device.

- In «Download» folder we have to find «geogis-0.1-debug.apk» file.

- We have to click over the file and follow the stepts to install the APP into our devices.

- Finally, we have to check if the app is installed correctly.

  - We can find the APP installed into our device menú. The APP is called «GIS Collector»

4. APP Install (Exemple)
